

IRON BLASTER 2.0

FALLOUT REMOVER (2630)

DESCRIPTION

Iron Blaster 2.0 is designed to remove stubborn iron contaminants from vehicle paint and painted wheels. This neutral pH formula breaks down high-metallic brake dust, rail dust, industrial fallout and stuck on iron deposits. Iron Blaster 2.0 was developed to dissolve even the toughest fallout while restoring paint to a bright finish. Iron Blaster is safe to use on all OEM automotive exterior surfaces.

DIRECTIONS

Before final wash of the vehicle use Malco Iron Blaster 2.0 to remove fallout contaminants. Rinse loose dirt and grime and ensure surface is cool and out of direct sunlight. Shake bottle well, spray onto contaminated area and let dwell for 3 - 4 minutes, allowing the formula to penetrate and loosen the particles. Do not allow product to dry on surface. The formula will turn from red to purple as it begins working. Rinse thoroughly, using high pressure water if possible. If some iron contaminants remain after rinsing, reapply more liberally and agitate with a towel or sponge if necessary. Always do a final rinse before beginning the traditional washing step.

FEATURES & BENEFITS

Low-Odor Formula

Less offensive scent

Removes Fallout

Quickly breaks down iron and fallout contaminants

Color-Changing

Thicker, red formula quickly turns fallout to purple

Neutral pH

Formula is more environmentally friendly

Safe on Surfaces

Safe to use on all OEM finishes and coatings

VOC Compliant

Adheres to regulations regarding volatile organic compounds

PACKAGE SIZES

6 – 16 oz.

Part number: 263016

4 – 1 Gallon

Part number: 263001
